

# kp FlexiLid® EH 145 R

Recyclable barrier top lidding film

kp FlexiLid® EH 145 R is our recyclable barrier top lidding film produced with our best-in-class blown extrusion technology which works within the PE recycling stream. This unique film is specially formulated to be as thin as possible, while creating a superior seal in conjunction with rigid films and trays to maximise food preservation and extend shelf life. When combined with our sustainable tray technologies you get a fully recyclable case-ready solution.

## Packer/Processor Benefits

- Bespoke formulas
- Designed for high-speed tray sealers
- Hermetic lock seals through contamination
- High barrier (OTR < 5) for modified atmosphere packaging

## Retailer Benefits

- Good optics
- Anti fog technology
- Easy to print, laminate and brand
- Extends shelf life

## Sustainability Benefits

- Certified recyclable barrier lidding film in PE stream
- Compliance with in-store collection where available\*
- Combine with kp Zapora® trays for a fully recyclable case-ready solution

\*Easily sorted and recycled where the right infrastructure is in place.

# kp FlexiLid® EH 145 R

## Recyclable barrier top lidding film

kp FlexiLid® EH 145 R is certified and validated by third party organisations as fully recyclable and is the perfect solution to protect food and reduce your packaging footprint. With more than 90% of PE, kp FlexiLid® EH 145 R is well above the packaging guideline specifications.

### High barrier

Extends shelf life, preserves quality and taste of product with outstanding optics in a high barrier film (OTR<5).

### Anti fog

Specially formulated to reduce haze and condensation inside the pack from modified atmospheres, ensuring optimum presentation and food preservation.

### Printing

Easy to print for brand excellence and appeal, removing the need for additional labels.

### Operational excellence

Designed for high-speed packing lines.

### Fully recyclable

Fully recyclable top lidding film\* is certified by third party organizations with more than 90% of PE which exceeds packaging guideline specifications.

### Seals through contamination

Outstanding sealability and seals through contamination.

\*\*Fulfills criteria of compatibility of the D4ACE guidelines for PE mechanical recycling

We produce plastics in rigid films, rigid trays and flexible films across **21 manufacturing sites in 14 countries worldwide**
